

## Connecting to Guest Wifi Network – Android

This network has limited internet access along with content filtering. Gaming and social media are some of the content filtering not permitted. Accept terms before gaining access to the network.

Android Devices will look vary in appearance depending on hardware, Android version, and carriers. This is a general guide for connecting on Android based devices.

1. To connect to a wifi network, go to your Settings. Then select Wireless and Networks or Wifi.
2. As long as your wifi is on, you'll see a list of available networks. Select the network with Guest in the name. The Guest networks are for the personal devices of visitors without employee or student network accounts.

3. After connecting, you will be asked to agree to the terms. Click on Continue to the Internet to fully connect.
